ECO VACUUM FILLING MACHINE

NEW

Introducing the new Microfill XXs Vacuum filling machine. From the World leader in vacuum filling equipment TB Acessorios.

OVER 900 ECO Units installed world wide

ECO filling machines are standard in every Cartridge World store in USA. Over 50 stores in Australia.

Total vacuum level control between 0 -96% & no syringes

- 16 or 32 ink lines on tap
- 8 ink outlets in vacuum chamber
- Precise ink control
- No air compressor needed
- Simple operation
- 1 & 2 stage filling control
- 0-96% vacuum total control

Also available
ECO 48/11 & ECO 32/6

Advanced Consumable Technologies 5 / 890 Bourke St. Waterloo NSW 2017 T 02 9319 5055 F 02 9319 3055 www.adcon.net.au sales@adcon.net.au

Consistant high quality refilling is very important.

If you are the business owner and have staff, you want to make sure your cartridges are being filled properly. No short cuts, no mistakes and you want to ensure the quality of the product that goes out the door meets top quality standards each and every time.

8 years of store feedback from around the world has shown that user error and taking short cuts increases the failure rate. The ECO electronic machines do not leave it up the operator to ensure you get a precise fill every time and that air is released back into the vacuum chamber at the correct precise speed every time. This gives you predicable, repeatable and consistent results. Different operators will get the same top quality results.

- Most reliable robust machines on the market.
- No syringes to constantly replace.
- Simple operation
- Precise filling rate and volume
- World wide refilling data base
- Equiped with water/cleaning solution pump.

ECO own an run a large chain of refill stores themselves. This gives them direct real world experience about the day to day issues, techniques and equipment reliability issues.

Dr Wolfgang Reich's research has led to many of the common techniques for vacuum refilling and processing todays inkjet cartridges and his developments have been copied by many companies trying to replicate the ECO process.

“ I had another brand, refilling machine with all manual controls. I found my staff would try and speed up the process and we had variable results. Some days good, some batches with higher failures. It took me a long time to work out why the quality varied so much. I was told having total control over the whole process was a good thing, but it has ended up loosing us a lot of customers.

When I got a new ECO machine the refill quality went up because the machine took care of all the important things and made sure we had a consistent quality fill every time. Unlike the other machine, I did not need to buy other devices to stop overflow contamination issues we were having. We have not had to replace any parts in over 3 years of use, the machine hasn't missed a beat, our old machine needed parts on a number of occassions. The ECO system does a perfect fill and prime every time when we followed the standard filling procedure.

With the ECO I can get other people in my store to fill cartridges with confidence and know the results will be the same as if I were doing it myself. This gives me time to work on my business instead of refilling cartridges out the back and fixing problems.”

ECO gives you control when you need it and takes control of the critical points of the process that need to be maintained.
